SOURCE OF EVENT OR ORIGIN OF INFECTION

- Contact with wild species
- Unknown or inconclusive

EPIDEMIOLOGICAL COMMENTS

Highly pathogenic avian influenza (HPAI) H5N1 Eurasian lineage goose/Guangdong clade 2.3.4.4b has been confirmed in samples from dairy cattle in California (CA), Colorado (CO), Idaho (ID), Iowa (IA), Kansas (KS), Michigan (MI), Minnesota (MN), New Mexico (NM), North Carolina (NC), Ohio (OH), Oklahoma (OK), South Dakota (SD), Texas (TX), and Wyoming (WY). Updates to the detections of highly pathogenic avian influenza (HPAI) in livestock can be found at: <https://www.aphis.usda.gov/livestock-poultry-disease/avian/avian-influenza/hpai-detections/livestock>. On 24 April 2024, The Animal and Plant Health Inspection Service (APHIS), United States Department of Agriculture issued a federal order requiring pre-movement testing and reporting of highly pathogenic avian influenza (HPAI) in livestock.

QUANTITATIVE DATA SUMMARY

MEASURING UNIT

Animal

Species		Susceptible	Cases	Deaths	Killed and Disposed of	Slaughtered/ Killed for commercial use	Vaccinated
camelidae (domestic)	NEW	-	-	-	-	-	-
